

THE CAREER & LIFE MAP

Choose a direction. Build the right skills. Create a 90-day plan you can actually follow.

A PRACTICAL WORKBOOK FOR REAL LIFE

For people starting out, changing direction, or advancing without losing sight of health, money, relationships, and the life they want to build.

02

Make this workbook yours

This is not a personality verdict or a promise that one perfect career exists. It is a decision-making workspace. You will gather evidence, test options, choose a useful next direction, and review what happens.

Name

Date started

Where I am in my career right now

My main route

START - entering or re-entering work

CHANGE - moving into a new field

ADVANCE - growing in my current field

What would make this workbook worth finishing?

03

What you will leave with

By the end, you will have six concrete outputs. They are more useful than a long list of jobs that merely sound interesting.

- A personal compass: values, interests, strengths, conditions, and constraints.
- A researched career shortlist with a primary direction and a backup.
- A prioritized skill stack connected to real role requirements.
- A learning-and-evidence plan that produces visible proof, not only course completions.
- A life system for time, energy, money, relationships, and recovery.
- A 90-day plan with milestones, weekly actions, and obstacle responses.

THE RULE

Do not wait for certainty. Seek enough evidence for the next responsible experiment.

The decision or change I most need help with

04

How to use the workbook

- Move in order the first time. Later, revisit only the pages that match your next decision.
- Answer quickly before polishing. Honest rough notes are more valuable than impressive vague ones.
- Mark assumptions with an A. Mark verified facts with a V. Turn important assumptions into research questions.
- Use a weekly 20-minute review. Progress comes from repeated adjustment, not one perfect planning session.
- Save useful skills, careers, and paths in your Modern Skill Lab account as you work.

Choose a working rhythm

One focused weekend

Two pages per weekday

One section per week

With a friend, coach, mentor, or counsellor

PRIVACY

Your answers may include personal information. Store the workbook somewhere appropriate and share only what you choose.

My scheduled time and place for the first session

05

Choose your route

All routes use the same process, but the evidence you need differs.

START

Prioritize exposure, basic employability, work samples, references, and low-risk experiments. Your first direction does not need to be permanent.

CHANGE

Translate existing experience, test the new environment, identify only the gaps that matter, and protect your financial runway.

ADVANCE

Clarify the next scope of responsibility, strengthen leverage skills, document outcomes, and build sponsorship as well as competence.

My route-specific question

Evidence that would help me answer it

06

Your map at a glance

- Part 1 - Current Reality pages 7-14
- Part 2 - Personal Compass pages 15-24
- Part 3 - Career Exploration pages 25-37
- Part 4 - Skill Strategy pages 38-47
- Part 5 - Life Management pages 48-55
- Part 6 - The 90-Day Plan pages 56-58
- Sources, safeguards, and next steps pages 59-60

BEST RESULTS

Use the linked official tools for labour-market facts and assessments, then record the parts that matter here. This guide does not reproduce proprietary or licensed test questions.

- > [Open Modern Skill Lab](#)
- > [Open Government of Canada Job Bank career planning](#)

SECTION 1 OF 6

Part 1: Current Reality

Good plans begin with the life you actually have, not the life you think you should have.

- 1

Name the current situation without judgment.
- 2

Notice what creates and drains momentum.
- 3

Surface constraints early.
- 4

Estimate time, energy, and financial room for change.

SECTION OUTCOME

A one-page baseline and a clear statement of what must change first.

YOUR SIX-PART MAP

08

Current reality snapshot

Clarity about my next direction

unclear

12345

clear

Confidence I can make progress

low

12345

high

Available time each week

none

12345

enough

Energy after essential responsibilities

depleted

12345

steady

Financial room to experiment

tight

12345

flexible

The facts of my current work, study, or transition situation

The story I keep telling myself about those facts

SEPARATE FACT FROM INTERPRETATION

Facts can be checked. Stories may be helpful, harmful, or incomplete. Treat the difference as useful data.

09

Wins, signals, and drains

Look back 6-12 months. Small events often reveal more than abstract preferences.

Three moments when I felt useful, capable, curious, or proud

What I was doing, who benefited, and what skill I used

Three recurring drains or frustrations

Which drains come from the task, environment, people, pace, or lack of control?

PATTERN, NOT MOOD

One hard day proves little. Repeated patterns deserve investigation.

10

Time and energy audit

For one typical week, estimate rather than idealize. Include paid work, caregiving, commuting, household tasks, sleep, and recovery.

Fixed commitments and approximate weekly hours

Flexible commitments I can reduce, batch, share, or pause

My highest-energy windows

My lowest-energy windows

A realistic weekly learning capacity

1-2 hours

3-4 hours

5-7 hours

8+ hours

The smallest repeatable study/practice block I can protect

11

Responsibilities and constraints

Constraints are design inputs. Some can change; others must be respected for now.

Factors to plan around

Caregiving or family responsibilities

Schedule or shift work

Health, disability, or accessibility needs

Income and benefits

Transportation or location

Language or credential requirements

Immigration or work authorization

Technology or internet access

My three most important non-negotiables

What is flexible, negotiable, or temporary?

Who should be included in this decision?

ACCESSIBILITY COUNTS

A suitable path is one you can realistically enter, perform, and sustain with appropriate support or accommodation.

12

Financial runway snapshot

This page is a planning snapshot, not individualized financial advice. Use verified numbers and consult a qualified professional when stakes are high.

Minimum essential monthly costs

Reliable monthly income

Savings or transition funds available

Known one-time transition costs

Benefits, debt payments, taxes, or obligations I must protect

My safest transition pattern

Learn while staying employed

Seek funded or employer-supported training

Reduce hours gradually

Not sure - research needed

Use a defined study period

USE OFFICIAL TOOLS

The Financial Consumer Agency of Canada provides a Budget Planner and neutral guidance on needs, wants, savings, and emergency funds.

> [FCAC: Making a budget](#)

13

What must change first?

A career plan cannot solve every life problem. Choose the bottleneck that, if improved, would create the most useful room for progress.

The situation I no longer want to repeat

The first-order problem beneath it

The problem is mainly about

Direction

Time or energy

Skills

Money or stability

Evidence or experience

Work environment

Access or network

Health or support

One change within my influence during the next 30 days

One factor outside my control that I will plan around

14

Current reality baseline

My current situation in three sentences

My available weekly capacity

My most important constraints and supports

The first bottleneck to address

A baseline number I can compare in 90 days (hours practiced, applications, energy rating, savings, or another measure)

MAKE IT REAL ON MODERN SKILL LAB

Create or update your account. Use your profile and saved items as the digital companion to this workbook.

> [Open your dashboard](#)

SECTION 2 OF 6

Part 2: Personal Compass

Fit is not one personality label. It is the changing relationship between you, the work, the environment, and your life.

- 1

Clarify values without pretending trade-offs disappear.
- 2

Find repeated interests and task preferences.
- 3

Turn strengths into evidence-based claims.
- 4

Name the conditions that help you do good work.

SECTION OUTCOME
A compact compass you can use to filter careers, roles, teams, and learning choices.

YOUR SIX-PART MAP

16

Values: what should work support?

Choose values by examining trade-offs, not by selecting only admirable words.

Values that matter now

Stability

Income

Autonomy

Flexibility

Mastery

Security

Service

Leadership

Creativity

Variety

Belonging

Purpose

Recognition

Balance

My top five values and what each means in behaviour

A recent choice that proves one of these values

> [Job Bank: Work values quiz](#)

17

Values under pressure

Most decisions offer bundles, not perfect scores. Decide what you need, what you prefer, and what you can tolerate temporarily.

Value pair 1: If forced to lean one way, I choose ___ over ___ because...

Value pair 2: If forced to lean one way, I choose ___ over ___ because...

Value pair 3: If forced to lean one way, I choose ___ over ___ because...

My three minimum standards for a role or learning path

A trade-off I will accept for 6-12 months - and the limit

REVISIT LATER

Values can stay important while their order changes with life stage, health, family, or finances.

18

Interest patterns

Job titles hide the actual work. Look for activities that repeatedly pull your attention.

Topics I explore without being assigned

Problems I enjoy thinking about

Kinds of people, users, or communities I want to help

Activities I prefer: creating, analyzing, organizing, persuading, caring, repairing, teaching, investigating, building, or coordinating

Three tasks I want more of and three I want less of

[> Job Bank: Career quizzes](#)

19

Strength claims need evidence

A strength is not only something you like. It is a capacity you can use with reasonable consistency in a relevant setting.

Strength 1 - claim, example, result, and conditions

Strength 2 - claim, example, result, and conditions

Strength 3 - claim, example, result, and conditions

A strength I underuse or take for granted

LANGUAGE UPGRADE

Replace 'I am a people person' with a specific claim such as 'I clarify complex requests and align different stakeholders.'

20

Transferable skills inventory

Transferable skills can move across roles and industries when you explain the context and level.

Skills I can support with an example

Communication	Reading and writing
Collaboration	Creativity and innovation
Problem solving	Planning and coordination
Adaptability	Customer or client service
Digital skills	Leadership
Numeracy	Research and analysis

My five most portable skills

Evidence for the two most important

> [Government of Canada: Skills for Success](#)

21

Working conditions

The same task can feel completely different across teams, schedules, managers, and environments.

Conditions to consider

Independent focus	Public-facing
Frequent collaboration	Clear standards
Predictable routine	High autonomy
Rapid change	Small team
Remote	Large organization
On-site	Travel
Outdoor or physical	Flexible schedule

Conditions that help me perform

Conditions that are difficult but manageable

Conditions that are deal-breakers or require support

What I need from a manager or team

22

The feedback circle

Choose 3-5 people who have seen you work, learn, volunteer, care for others, or solve problems. Ask for examples, not compliments.

- When have you seen me at my best?
- What kinds of problems do you trust me to handle?
- What do I learn unusually quickly?
- Where do I create friction or need support?
- What role or environment might I overlook?

People I will ask and why each perspective matters

What I heard more than once

Feedback I disagree with or need to test

CONSENT AND BOUNDARIES

Ask for 10-15 minutes, explain the purpose, and do not pressure anyone to provide a reference.

23

Capability, confidence, and desire

You can be capable but uninterested, interested but inexperienced, or confident without enough evidence. Rate each separately.

A skill I can do but do not want central to my next role

A skill I want to use but need to build

A skill where confidence is lower than evidence suggests

A skill where confidence is higher than current evidence

One safe way to test each uncertain area

BETTER QUESTION

Instead of 'Am I good at this?' ask 'At what level, in what context, with what support, and with what evidence?'

24

Your personal compass

The values my next step must support

Tasks and problems I want more of

Strengths and transferable skills I can prove

Working conditions that help me thrive

Constraints and deal-breakers

My one-sentence compass: I am looking for work where I can...

USE IT AS A FILTER

A compass narrows options; it does not choose for you. The next section adds real-world evidence.

SECTION 3 OF 6

Part 3: Career Exploration

Treat career ideas as hypotheses. Research the work, speak with people, and run small experiments before making an expensive commitment.

- 1

Generate options without falling in love with titles.
- 2

Check duties, requirements, wages, and outlook by location.
- 3

Collect lived experience through conversations.
- 4

Compare options using the same criteria.

SECTION OUTCOME
A primary direction, a credible backup, and a next experiment.

YOUR SIX-PART MAP

26

Write career hypotheses

A useful hypothesis links a role, context, reasons, and unknowns.

TEMPLATE

I may fit [role or work family] in [setting] because [evidence]. I need to learn whether [important unknown].

Hypothesis 1

Hypothesis 2

Hypothesis 3

The assumption shared by all three

The fastest ethical way to test that assumption

27

Generate a wider option set

Generate at least ten options before judging. Include adjacent roles, different industries, and roles that use the same skill in a new context.

Three obvious options

Three adjacent options

Two unexpected options suggested by another person or assessment

Two bridge roles that could build useful evidence

Expansion lenses used

Same role, different industry

Less credential-heavy entry point

Same industry, different function

Public, private, nonprofit, or self-employed setting

Same skill, different customer

> [Job Bank: Job transition tool](#)

28

Build your career scorecard

Choose criteria before reading attractive job descriptions. Weight what matters now.

Five criteria (examples: duties, learning, income, location, schedule, outlook, access, values fit)

Weight each criterion from 1 to 5

Minimum threshold or deal-breaker for each

What evidence would count as a reliable score?

KEEP UNCERTAINTY VISIBLE

Use a question mark where evidence is weak. A precise-looking score based on guesses is still a guess.

29

Career research sheet A

Role / occupation / work family

Location or market

Typical duties and problems solved

Required and commonly requested qualifications

Wages or compensation range - source and date checked

Employment outlook and demand signals - source and date checked

What appeals, what concerns me, and what remains unknown

> [Job Bank: Search job profiles](#)

30

Career research sheet B

Role / occupation / work family

Location or market

Typical duties and problems solved

Required and commonly requested qualifications

Wages or compensation range - source and date checked

Employment outlook and demand signals - source and date checked

What appeals, what concerns me, and what remains unknown

> [Job Bank: Search job profiles](#)

31

Labour-market reality check

Use current, local evidence. National growth stories may not reflect your region, entry level, language, schedule, or credential situation.

Evidence gathered

Official occupational profile

Credential or licensing rules

Local wage range

Training cost and duration

Regional outlook

Entry-level and experienced requirements

Ten recent job postings

Automation or technology changes

What employers repeatedly request

What varies across employers

What appears negotiable or learnable on the job

One risk and one opportunity I had not considered

> [Job Bank: Explore occupations](#)

32

Plan an informational interview

The goal is understanding, not asking a stranger for a job. Start with people one or two steps ahead, alumni, associations, community groups, or warm introductions.

Person / role / why their perspective matters

A respectful 3-sentence request

Conversation setup

Ask for 15-20 minutes

Make it easy to decline

Offer phone/video/in-person options

Do not attach a resume unless requested

Say how you found them

What I already know so I do not waste their time

How I will thank them and record next steps

33

Informational interview guide

- What does a normal week actually contain?
- Which tasks distinguish strong performance from average performance?
- What surprised you when you entered the field?
- Which entry paths are credible now?
- What do job descriptions overstate or omit?
- What tools, relationships, or constraints shape the work?
- What would you test before paying for training?
- Who else has a different perspective I should hear?

Three questions specific to this person

Key facts, stories, and contradictions I heard

What changed in my hypothesis

DO NOT GENERALIZE FROM ONE PERSON

One conversation is a data point. Seek different employers, seniority levels, and experiences.

34

Design a low-risk career experiment

A good experiment is small, realistic, ethical, and produces evidence within days or weeks.

Possible experiment types

Job shadow or workplace visit

Community challenge or hackathon

Volunteer project

Mock task using public data

Freelance-sized practice brief

Association event

Short course with a real deliverable

Temporary, contract, or bridge role

The assumption I am testing

The smallest realistic activity

Time, cost, permission, and accessibility limits

What I will observe or measure

Decision date and next step for each result

35

Compare options consistently

Score each shortlisted option from 1-5, multiply by your chosen weight, then add a confidence note: high, medium, or low evidence.

Option A - weighted score, evidence confidence, and biggest unknown

Option B - weighted score, evidence confidence, and biggest unknown

Option C - weighted score, evidence confidence, and biggest unknown

Which criterion changes the ranking most?

What would have to be true for the lower-ranked option to win?

NUMBERS SUPPORT JUDGMENT

Do not let a score erase safety, ethics, accessibility, or a non-negotiable constraint.

36

Decision pre-mortem

Imagine it is one year from now and this direction did not work. Generate plausible causes before committing.

Failure cause 1 and an early warning sign

Failure cause 2 and an early warning sign

Failure cause 3 and an early warning sign

A prevention or response for each

The risk I accept because the potential learning is worth it

RISK IS NOT FAILURE

A bounded experiment can succeed by disproving an option before a larger investment.

37

Choose a direction and a backup

Primary direction for the next 90 days

Why it currently wins

Backup direction that preserves useful options

The evidence that could change my mind

My next career experiment and completion date

People affected by this decision and how I will communicate

MAKE IT REAL ON MODERN SKILL LAB

Save the relevant career, related skills, and at least one learning path so your digital profile reflects the decision.

[> Browse careers](#)

SECTION 4 OF 6

Part 4: Skill Strategy

Do not collect random courses. Build the smallest skill stack that improves performance, access, and evidence for your chosen direction.

- 1

Translate role requirements into observable skills.
- 2

Prioritize gaps by importance and evidence.
- 3

Practice at the edge of current ability.
- 4

Create proof that another person can review.

SECTION OUTCOME

A 30-day learning sprint connected to a real work sample.

YOUR SIX-PART MAP

39

Map the role to skills

Collect repeated requirements from job profiles, postings, conversations, and credible professional sources.

Requirement 1 -> observable behaviour -> evidence

Requirement 2 -> observable behaviour -> evidence

Requirement 3 -> observable behaviour -> evidence

Requirement 4 -> observable behaviour -> evidence

Which requirements are screening signals versus daily work?

AVOID KEYWORD LEARNING

A tool name is not the whole skill. Ask what problem the tool helps solve and what good judgment looks like.

40

Build a three-layer skill stack

FOUNDATION

Skills required to participate safely and reliably: communication, digital fluency, core technical knowledge, workplace norms.

LEVERAGE

Skills that make other skills more useful: problem framing, writing, data interpretation, collaboration, project execution.

DIFFERENTIATOR

A credible combination that makes your contribution distinctive for a specific user, industry, or problem.

My foundation skills

My leverage skills

My differentiator combination

The user or employer problem this stack helps solve

41

Prioritize gaps

Do not automatically study your weakest skill. Prioritize skills that matter to the target work and can improve through accessible practice.

Candidate skill gaps

Importance to target role: 1-5 for each

Current evidence level: none / basic / working / strong

Practice opportunity in the next 30 days

Top two priorities and why

One low-priority gap I will deliberately ignore for now

A NARROWER PLAN WINS

Two practiced skills with evidence usually beat ten bookmarked topics.

42

Choose a learning path

Selection criteria

Clear learning outcome	Current and credible content
Appropriate starting level	Accessible format
Active practice	Affordable total cost
Feedback or answer criteria	A deliverable or assessment

Chosen skill and starting level

Resource or Modern Skill Lab path

What I should be able to do afterward

How I will know the resource is working by week two

Exit rule if it is not useful

> Browse learning paths

43

Design effective practice

Watching and highlighting can support learning, but performance improves when you attempt the task, inspect the result, and adjust.

Target performance: what will I be able to do?

A task slightly beyond my current comfort

Feedback source: person, rubric, test, comparison, or outcome

The error or weakness I will focus on first

How the next attempt will differ

Three scheduled practice blocks

KEEP A PRACTICE LOG

Record date, task, difficulty, feedback, adjustment, and next attempt. Time spent alone is a weak measure.

44

Turn learning into evidence

Evidence should be easy to inspect and safe to share. Remove confidential, employer-owned, or personal information.

Evidence formats

Work sample	Analysis using public data
Case study	Reference or testimonial
Before-and-after improvement	Verified assessment
Short demonstration	Process notes and reflection
Explainer or tutorial	

Audience and problem

Deliverable and quality criteria

What is mine to share and what must stay private

Where it will live and how someone can review it

The result, feedback, or learning I will document

45

Write a compact case study

Context: who needed what, and what constraints mattered?

Action: what did I personally decide, create, analyze, or improve?

Result: what changed? Use numbers only when accurate and relevant.

Learning: what would I repeat or change?

One sentence connecting this evidence to the target role

CREDIBILITY

Be precise about team contributions, simulated projects, and estimates. Honest scope increases trust.

46

Create a 30-day learning sprint

Skill and specific performance goal

Week 1 - baseline attempt and fundamentals

Week 2 - focused practice and first feedback

Week 3 - harder version or real constraint

Week 4 - final evidence piece and reflection

Completion criteria and review date

Guardrails

- Fits my weekly capacity

Produces visible evidence
- Uses information I may legally share

Has a stop or simplify rule
- Has a feedback source

47

Skill strategy dashboard

Target role or direction

Priority skill 1 and evidence goal

Priority skill 2 and evidence goal

Chosen learning path or resources

Practice schedule

Reviewer or feedback method

Portfolio link or planned location

MAKE IT REAL ON MODERN SKILL LAB

Save the priority skills, use the Practice Lab where available, and return to your dashboard to keep progress connected.

> [Browse skills](#)

SECTION 5 OF 6

Part 5: Life Management

Career progress is part of a life system. A plan that repeatedly borrows from sleep, health, relationships, or financial stability is not sustainable.

- 1

See the whole life, not only the career goal.
- 2

Protect time and energy for what matters.
- 3

Plan money and support during transition.
- 4

Recognize when self-management is not enough and seek help.

SECTION OUTCOME
A realistic weekly operating system with boundaries and support.

YOUR SIX-PART MAP

49

Map your life domains

Rate satisfaction and capacity separately. A valued area may still be under strain.

Work / learning

strained

12345

supported

Money / stability

strained

12345

supported

Health / energy

strained

12345

supported

Relationships / community

strained

12345

supported

Home / responsibilities

strained

12345

supported

Rest / play / meaning

strained

12345

supported

The domain needing protection, not optimization

The domain where a small improvement would help everything else

One action that supports both domains

50

Design an ideal-enough week

Plan a repeatable week, not a heroic one. Begin with sleep, essential care, paid work, and immovable responsibilities.

Fixed anchors: sleep, work, care, meals, appointments

Three career or learning blocks

Recovery and relationship blocks

Administrative buffer and catch-up time

What I will do when the week is disrupted

MINIMUM VIABLE WEEK

Define a smaller version - perhaps one 25-minute practice block and one review - so disruption does not become abandonment.

51

Create a stop-doing list

Every new commitment has a cost. Free capacity before relying on willpower.

Things I will stop, pause, reduce, batch, automate, or delegate

Requests I will answer with 'not now'

Digital distractions I will make harder to access

A boundary sentence I can actually say

What I refuse to sacrifice repeatedly

BOUNDARY TEST

A boundary is a behaviour you control, not a demand that another person behave differently.

52

Money and transition plan

Use this page to prepare questions and scenarios. Verify costs, taxes, benefits, eligibility, and deadlines with official sources or qualified professionals.

Expected training, equipment, transport, childcare, and application costs

Income scenarios: conservative / expected / optimistic

Benefits, insurance, pension, grants, or supports to investigate

My financial stop-loss or reassessment point

Questions for an official source or qualified adviser

> **FCAC: Financial Toolkit**

53

Build a support network

Support roles I may need

Encourager

Truth-teller

Skill reviewer

Industry guide

Accountability partner

Reference

Practical helper

Health professional

Financial or legal professional

Community or cultural support

Who can fill each relevant role?

The specific, reasonable request I can make

How I will reciprocate or show appreciation

A support gap and where I could look

DO NOT MAKE ONE PERSON CARRY EVERY ROLE

A resilient network is distributed. Professional help belongs in the network when the problem requires it.

54

Protect energy and recovery

Career change can be demanding. Track patterns and protect basic recovery. Persistent distress, severe exhaustion, or safety concerns deserve qualified support, not a productivity hack.

Early signs that I am overextended

Activities that genuinely help me recover

Work or study conditions I can adjust

People or services I can contact

My plan for a bad week

CANADA CRISIS SUPPORT

If you or someone you know is in immediate danger, call 9-1-1. In Canada, call or text 9-8-8 for suicide crisis support, available 24/7.

> **Government of Canada: Mental health support**

55

Your personal operating system

My minimum viable week

Protected learning and recovery blocks

Three boundaries or stop-doing choices

Financial checkpoint

Support people and specific requests

Warning signs and response plan

THE SUSTAINABILITY QUESTION

Can I repeat this plan for twelve weeks without repeatedly violating a core responsibility or health need? If not, reduce the load.

56

Define the 90-day outcome

Choose an outcome you can influence. It should combine learning, evidence, and contact with the real world.

STRONG EXAMPLE

Complete one targeted learning sprint, publish two honest work samples, hold four career conversations, and submit six tailored applications to validated roles.

My 90-day outcome

Why this matters now

Measures I can count or verify

What is outside my control

The smaller version that would still count as meaningful progress

57

Milestones and weekly actions

Days 1-30 - learn, research, and produce the first evidence

Days 31-60 - improve evidence and increase real-world contact

Days 61-90 - apply, present, interview, or decide the next cycle

Three weekly lead actions I control

Weekly review time and location

LEAD BEFORE LAG

Track actions you control - practice attempts, conversations, work samples, and tailored applications - alongside results you cannot fully control.

58

Obstacles, if-then plans, and review

If-then plans connect a likely situation to a chosen response. Make the cue specific and the response small enough to perform.

If obstacle 1 happens, then I will...

If obstacle 2 happens, then I will...

If motivation is low, then my minimum action is...

Weekly review: what moved, what stalled, what did I learn?

At day 30, 60, and 90 I will continue / adjust / stop based on...

My next review date

EVIDENCE BEHIND THE METHOD

Research on implementation intentions finds that specific, rehearsed if-then plans can improve goal attainment, especially when people are motivated and the cue-response link is contingent.

59

Sources and further tools

This workbook uses original prompts informed by public career-planning guidance and behaviour research. It links to assessments rather than reproducing their questions.

- Government of Canada Job Bank - career planning, quizzes, job profiles, wages, requirements, and outlook.
- Government of Canada Skills for Success - foundational and transferable skills used in work, learning, and daily life.
- Financial Consumer Agency of Canada - budget planning and the Financial Toolkit.
- Alberta ALIS - career decision factors including values, interests, skills, traits, abilities, and preferred conditions.
- O*NET Resource Center - career exploration tools and licensing terms.

> **Job Bank career planning**

> **Skills for Success model**

> **FCAC making a budget**

> **ALIS: Identify your top factors**

> **O*NET career exploration tools**

> **O*NET licensing**

60

Sources, safeguards, and commitment

- Keller et al. (2024), meta-analysis of implementation-intention interventions across 642 independent tests. European Review of Social Psychology. DOI: 10.1080/10463283.2024.2334563.
- Gollwitzer & Sheeran (2006), implementation intentions and goal achievement meta-analysis. Advances in Experimental Social Psychology.
